Re: 50-155

File Copy *(suppl.)*

Dear Dr. Doan:

Attention: Mr. Roger S. Boyd

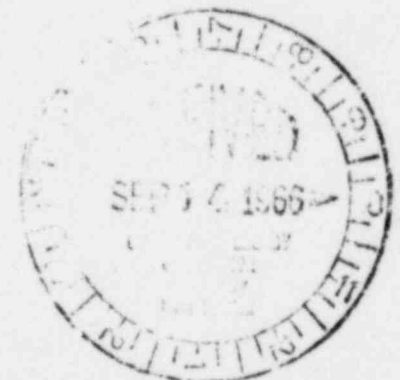

Enclosed herewith are five (5) copies of a Special Report (SR-9) covering the containment leak rate tests at our Big Rock Point Nuclear Plant. The results of the 1964 tests are included in response to your letter of July 14, 1965 requesting additional information on this test.

Both tests indicate the leak rate to be well below the Technical Specification limits, demonstrating to our satisfaction that there has been no detectable deterioration of vessel integrity during four years of operation.

Yours very truly,

Robert L. Haueter
Assistant Electric Production
Superintendent - Nuclear
