DOCKET NUMBER ~~PR-36, 32, 70, 150~~
PROPOSED RULE (~~10 CFR 70874~~)
~~SWEDE ALLOYS~~

Bay Village, Ohio
December 12, 1980

Mr. John F. Ahearn,
Chairman
Nuclear Regulatory Commission,
1616 H Street
Washington, D.C. 20555

~~POSTAGE~~

DEC 14 1980

Office of Consumer
Docketing & Service
Branch

Dear Mr. Ahearn --

I understand that the NRC is considering whether Unit 1 at Three Mile Island should be permitted to return to operation.

This is to urge that you and your fellow commissioners rule favorably on this request, and approve resumption of its full operation as early as possible.

I write this as a consumer -- with a good portion of my home's electric power coming from a companion-type reactor at the Davis-Besse plant near Toledo, Ohio.

I am no engineer or technical expert in nuclear energy, but I am well aware that the cost of producing power from such a plant is still significantly less than from a conventional fossil-fuel plant.

We customers in Ohio (of the Toledo Edison and Cleveland Electric Illuminating Companies) were saved more than \$40,000,000 on our electric bills last year alone through nuclear generation available to us.

I see no reason why such advantages should be denied to users in Pennsylvania, especially since -- if I understand correctly -- TMI Unit one was in no way involved with the March, 1979, TMI accident.

Thank you for your consideration of my comments.

Sincerely,

Robert H. Herrick
