Mr. Karl V. Seyfrit, Director  
U.S. Nuclear Regulatory Commission  
Region IV, Office of Inspection  
and Enforcement  
611 Ryan Plaza Drive  
Suite 1000  
Arlington, TX 76011

Dear Mr. Seyfrit:

River Bend Station - Units 1 & 2

Refer to: RIV

Docket Nos. 50-458/I&E Bulletin 80-16

50-459/I&E Bulletin 80-16

This response is the supplement referred to in our letter of September 5, 1980, which addressed our A/E's (S&W) scope of supply. Our NSSS vendor (G.E.) has recently completed its investigation of "Potential Misapplication of Rosemount, Inc. Models 1151 and 1152 Pressure Transmitters With Either "A" or "D" Output Codes" as stated in I&E Bulletin No. 80-16, and has identified the following instrument numbers (from the Master Parts List) as questionable:

C11-N054	E22-N050
C71-N050	E22-N054
E12-N052	E22-N056
E12-N055	E31-N080
E12-N056	E31-N081
E21-N051	E31-N083
E21-N052	E31-N084
E21-N053	E31-N085

To further address the instruments listed above, G.E. has committed to perform an internal design review during the first quarter of 1981, and to document the results at the end of that quarter.

8101210 672

Mr. Karl V. Seyfrit, Director  
December 2, 1980  
Page 2

It should be noted that none of the questionable instruments are installed and if any are found to be unacceptable, they will be dispositioned by the issuance of a Field Disposition Instruction (FDI).

Approximately 800 total man-hours have been consumed to date addressing I&E Bulletin 80-16. GSU will report on the results of G.E.'s internal design review and update the total man-hours entailed by May 1, 1981.

Sincerely,

*E. Linn Draper by GEB*
