Mr. James F. Ahearne, Chairman
U.S. Nuclear Regulatory Commission
1717 H Street
Washington 20555

Dear Mr. Ahearne:

CHECK NUMBER 50-289
FRS & UPL FAC

With the new administration in the saddle, guns blazing, etc. and all the political plums plucked it's time to attend to the vital issues which will involve all citizenry, be they here or Hanaford.

To wit; Docket 50-289SP, Three Mile Island Unit No. 1., Middletown PA.

As an individual taxpayer you are more than aware of the imperative need for more and more nuclear generating power and the burden the lack of such energy imposes on your hip pocket -- to say nothing of mine. As well, you are completely aware of the required modifications of TMI-1 and the assistance it will provide to that locality in terms of power bills.

Ergo, with those two cogent facts in hand it behooves you as chairman of the NRC to brush aside the clamorous crew which vociferously demands a continued shutdown of TMI-1 (and all other desperately needed nuclear plants) and GET THAT FACILITY BACK ON LINE!

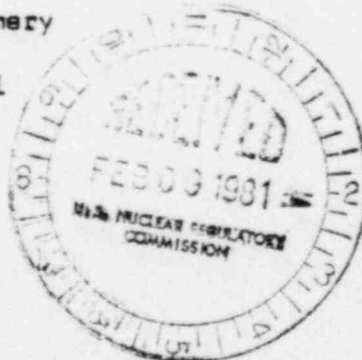

By copy of this urgent plea I am requesting the support of Congressman Emery to lend his support since we have a similar problem in the State of ~~Maine~~ wherein the uninformed are screaming for a shutdown of Maine Yankee.

Sincerely yours,

Carl M. Lynga

cc: David F. Emery
