P. O. BOX 1475
BALTIMORE, MARYLAND 21203

ARTHUR E. LUNDVALL, JR.
VICE PRESIDENT
SUPPLY

February 3, 1981

Mr. Boyce H. Grier, Director
Region I
Office of Inspection and Enforcement
U.S. Nuclear Regulatory Commission
631 Park Avenue
King of Prussia, PA 19406

Subject: Calvert Cliffs Nuclear Power Plant
Units Nos. 1 & 2, Dockets Nos. 50-317 & 50-318
IE Bulletin 79-01B

References: (a) NRC IE Bulletin 79-01B and Supplements
(b) BG&E letter dated 10/31/80 from A. E. Lundvall, Jr.
to B. H. Grier, same subject.

Dear Mr. Grier:

The enclosed reports, one for Unit No. 1 and one for Unit No. 2, are submitted in accordance with Supplement No. 3 of Reference (a) and constitute an update of our previous submittal, Reference (b), on this subject.

The enclosed reports include that Class 1E equipment located in hazardous areas as previously defined and also that equipment necessary to bring the plant to a cold shutdown condition. Within the reports, we have provided details on corrective action for those components that do not appear to have adequate qualification data available.

Qualification information for installed TMI Action Plan equipment is detailed below:

- a) Relief Valve Position Indication - We have received a draft of the qualification test report for comment from Technology for Energy Corporation. This will be reviewed and incorporated into the report.
- b) Containment Water Level - The qualification test program for ITT Barton transmitters is scheduled for completion by September 1981. When the report is received and reviewed, the equipment will be incorporated into the report. When the remaining equipment is installed and credit is taken for the installation, we will again update the report.

In addition to the above, we have not yet completed our review of the new inside and outside containment radiation analyses. We now anticipate completion by July 1, 1981.
