Office of Nuclear Reactor Regulation
U. S. Nuclear Regulatory Commission
Washington, D. C. 20555

Attn: Mr. Robert A. Clark, Chief
Operating Reactors Branch #3
Division of Licensing

Subject: Calvert Cliffs Nuclear Power Plant
Units No. 1 & 2, Docket No. 50-317 & 50-318
Emergency Preparedness

Reference: a) 10 CFR 50.54 (s) (2)
b) NUREG 0737, Item III.A.2
c) NRC letter dated 2/18/81 from D. G. Eisenhut
to All Licensees, Post-TMI Requirements
for the Emergency Operations Facility.

Gentlemen:

The purpose of this letter is to inform you of our intentions and commitments with respect to the requirements of References (a), (b) and (c).

Specifically, References (a) and (b) require the implementation of radiological emergency response plans and compliance with the meteorological and radiological dose assessment requirements by April 1, 1981.

In response:

1) The Calvert Cliffs Nuclear Power Plant Emergency Response Plan (ERP) will be implemented effective April 1, 1981. However, certain items described in the ERP are changed as described below. These changes will be reflected in our next revision to the ERP.

(a) Section 4.2.1.1 - The minicomputer system is expected to be available by June of this year. The backup system as described is available currently,

(b) Appendix J Attachment J-4 and Figure 5.2.1 - The upgrade of the Technical Support Center (TSC) is expected to be completed in 1981. The interim TSC as implemented on 1/1/80 is available currently;

F

March 30, 1981

- (c) Appendix J Attachment J-2 - The radiation information pamphlet was provided to the State of Maryland and the Counties of Calvert, Dorchester and St. Mary's in March 1981 for distribution by them to the public;
 - (d) Appendix J Attachment J-5 - The plans for the Emergency Operations Facility (EOF) are being reassessed in light of Reference (c) and are discussed further below.
- 2) We will not be able to comply with milestone (3) of Reference (b) but will comply with the stated alternative to that milestone. Specifically, we will provide a meteorological measurements system consistent with our existing Technical Specifications as the baseline, and we will comply with compensating actions (ii) and (iii) as stated in Reference (b).

Reference (c) requested a confirmation that the implementation dates contained in Enclosure (1) to that document (Enclosure 1 is assumed to be the seven pages numbered III.A.1.2-1 thru 7) will be met.

In response:

- 1) We intend to meet the staffing levels and implementation dates as described in Reference (c);
- 2) We intend to submit the conceptual designs for the upgraded EOF and TSC by June 1, 1981 and are making every effort to have the upgraded facilities operational by October 1, 1982. We are, however, not optimistic about having the EOF ready by that time. We will inform you as soon as we become aware of any need to establish a later operational date for that facility and will provide a detailed justification for any such slippage.
- 3) We will submit proposed changes to the Technical Specifications to support the actions described in 1) and 2) above.

If you have any question or problems with our intentions as stated herein, please contact us at your convenience.

Very truly yours,
