The enclosed information is being submitted in connection with the commitments made by Westinghouse in WCAP-8587, "Methodology for Qualifying Westinghouse WRD Supplied Safety Related Electrical Equipment." The generic qualification program described in WCAP-8587 is in accordance with Regulatory Guide 1.89 (IEEE 323-1974) and 1.100 (IEEE 344-1975). It is referenced by a number of plants in Section 3.11 of the FSAR. The lead plant of this group is Comanche Peak.

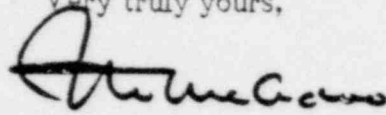

The enclosure contains copies of the completed proprietary and non-proprietary test reports describing environmental testing of the Westinghouse LMD Motors.

This supplement contains proprietary information of Westinghouse Electric Corporation. In conformance with the requirements of 10CFR Section 2.790, as amended, of the Commission's regulations, we are enclosing with this submittal an application for withholding from public disclosure and an affidavit. PROPRIETARY INFORMATION

Ref: NRC letter dated March 10, 1981 - SECY-81-119
"Environmental Qualification of Class 1E Equipment
Classification of Staff's Handling of Proprietary
Information Generic Letter No. 81-15."

Dear Mr. Miller:

The above referenced letter indicates that the NRC Staff concurs with the Westinghouse position that summary data alone is not sufficient to establish qualification of Class 1E Equipment. However, the reports included in this transmittal, which includes identification of proprietary material, were being developed to meet a previously established commitment for Comanche Peak prior to receipt of the March 10, 1981 NRC letter. In the future, in an effort to support the NRC and utility review of the equipment qualification program, Westinghouse will develop and submit summary type information to the Public Document Room for this report.

Very truly yours,

Robert A. Wiesemann, Manager
Regulatory & Legislative Affairs
