REPORT DATE

EVENT DESCRIPTION AND PROBABLE CONSEQUENCES (10)

02 A leak in the chemical waste receiver tank discharge pipe was observed
03 during routine rounds. The tank was pumped down and the defective section
04 isolated on 3/15/81. Repairs were completed on 3/18/81. The leakage oc-
05 curred in a controlled area and the fluid was contained in the radwaste
06 system. No hazard to the public occurred. Failure of the component is not
07 believed to be repetitive.
08

[illegible]

CAUSE DESCRIPTION AND CORRECTIVE ACTIONS (27)

1 0 Long term corrosion is postulated as the failure mechanism in an elbow in
1 1 the 3" piping. The elbow and short sections of piping which had also
1 2 deteriorated were replaced. Testing of an acid pump may have contributed
1 3 to the failure. Reportability is based on Tech Spec 6.9.2.b(4).
