Re: TMI Restarts

Gentlemen:

We are outraged that the restart of TMI is even being considered. Obviously the reactors and/or systems are flawed. What must happen to prove to you that nuclear power is too dangerous for mere mortals to handle?

Be advised that we have collected thousands of signatures on petitions in Oklahoma to phase out nuclear power and use good clean renewable resources- first you should argue, ~~plutonium~~ plutonium via the fast flux "breeder" reactor is not an acceptable "renewable" resource.

The good citizens of the Harrisburg area have suffered too much. Please do not contribute further to their problems.

DO NOT START ANY REACTORS AT TMI.

Sincerely,

Roberta Ann Funnell
