Suite 1000  
Arlington, TX 76011

Reference: Docket No. 50-285/81-02

Dear Mr. Seyfrit:

The purpose of this letter is to provide you with a brief status report regarding Omaha Public Power District's corrective actions in response to I. E. Inspection Report 81-02.

The District's response to the Inspection Report, dated February 28, 1981, discussed our commitment to implement a computerized training records management system for the Fort Calhoun Station. The first phase of this implementation consisted of inputting the fire brigade and licensed personnel training records by March 30, 1981. The fire brigade records system was fully implemented prior to the March 30th date. However, due to the scope of the program, the licensed personnel records system was not fully implemented until April 3, 1981. Phase two of this program, regarding the implementation of a similar records management system for security, health physics, maintenance and emergency plan training, is partially completed and we expect to meet the scheduled completion date of April 30, 1981.

In our February 28th letter, the District also committed to a review of training requirements relative to our training manual, the review to be completed by May 1, 1981. In order for us to meet our next commitment of issuing a revised training manual by June 1, 1981, we have already completed our review of our training manual and training requirements. At the present time we fully expect to have our training manual revised and issued by the June 1, 1981 commitment date.

Violation B.3 was concerned with quarterly fire drills involving the entire plant staff. The District's February 28th letter stated that we would be in full compliance April 1, 1981. On March 26, 1981, a plant wide fire drill was conducted for the first quarter of 1981; and thus, the District is presently in full compliance.

Violation C.3 was concerned with licensed requalification examinations. The District's February 28th letter stated that we would begin administering a restructured and revised requalification examination prior to March 31, 1981. Several examinations were administered prior to the end of March and as stated in our letter, full compliance will be achieved when all licensed personnel have completed the examination.

Violation D was concerned with the fact that documentation did not exist to ensure that all licensed operators were cognizant of facility license amendments 48, 49, 50, 51, 52 and 53. The February 28th letter stated that the District would be in full compliance by March 15, 1981. In accordance with the methods outlined in the District's response to this violation, the necessary documentation has been obtained and recorded to ensure that all licensed operators are cognizant of the documents in question.

Sincerely,

  
W. C. Jones  
Division Manager  
Production Operations
