Docket No. 50-009

Docketing and Service Section
 Office of the Secretary of the Commission

SUBJECT: MAINE YANKEE ATOMIC POWER COMPANY

Two signed originals of the Federal Register Notice identified below are enclosed for your transmittal to the Office of the Federal Register for publication. Additional conformed copies (12) of the Notice are enclosed for your use.

- Notice of Receipt of Application for Construction Permit(s) and Operating License(s).
- Notice of Receipt of Partial Application for Construction Permit(s) and Facility License(s): Time for Submission of Views on Antitrust Matters.
- Notice of Availability of Applicant's Environmental Report.
- Notice of Proposed Issuance of Amendment to Facility Operating License.
- Notice of Receipt of Application for Facility License(s); Notice of Availability of Applicant's Environmental Report; and Notice of Consideration of Issuance of Facility License(s) and Notice of Opportunity for Hearing.
- Notice of Availability of NRC Draft/Final Environmental Statement.
- Notice of Limited Work Authorization.
- Notice of Availability of Safety Evaluation Report.
- Notice of Issuance of Construction Permit(s).
- Notice of Issuance of Facility Operating License(s) or Amendment(s).
- Other: Referenced documents have been provided PDR.
Amendment No. 57

4. The system is

Introduction

The first step in the design of a building is to determine the requirements for the building. This is done through a process of consultation with the client and the architect. The architect then develops a concept for the building, which is then refined through a series of drawings and models. The final design is then used to obtain the necessary permits and to begin construction. The design process is an iterative one, and it is often necessary to make changes to the design as more information becomes available.

The design process is a complex one, and it is often necessary to make changes to the design as more information becomes available. This is particularly true in the case of buildings, where the design is often subject to change as the project progresses. The design process is an iterative one, and it is often necessary to make changes to the design as more information becomes available.

The design process is a complex one, and it is often necessary to make changes to the design as more information becomes available. 3.0 Environmental Conclusion

We have determined that the amendment does not authorize a change in effluent types or total amounts nor an increase in power level and will not result in any significant environmental impact. Having made this determination, we have further concluded that the amendment involves an action which is insignificant from the standpoint of environmental impact and, pursuant to 10 CFR §51.5(d)(4), that an environmental impact statement, or negative declaration and environmental impact appraisal need not be prepared in connection with the issuance of this amendment.

4.0 Conclusion

We have concluded, based on the considerations discussed above that: (1) because the amendment does not involve a significant increase in the probability or consequences of accidents previously considered and does not involve a significant decrease in a safety margin, the amendment does not involve a significant hazards consideration, (2) there is reasonable assurance that the health and safety of the public will not be endangered by operation in the proposed manner, and (3) such activities will be conducted in compliance with the Commission's regulations and the issuance of this amendment will not be inimical to the common defense and security or to the health and safety of the public.
