EVENT DESCRIPTION AND PROBABLE CONSEQUENCES (10)																			
While in Mode 3, initial fuel loading, a lower containment high temperature alarm was received in the Control Room. The feeder breakers for the containment ventilation air handling units C and D had tripped. This is in violation of T.S. 3.6.1.5 since the lower containment temperature exceeded 120°F. This is reportable per T.S. 6.9.1.13(b). Unit D was still capable of operation, therefore the health and safety of the public were not affected.

CAUSE DESCRIPTION AND CORRECTIVE ACTIONS (27)																			
The magnetic overload switch on Unit D breaker was adjusted incorrectly and it could not be readily determined what caused the unit C breaker to trip. The Unit C breaker was reset and the unit D breaker was replaced. Preventative maintenance will be performed on Unit D.
