

NRC's Atomic Safety & Licensing Board
Attn: Docketing and Service Section
Docket # 50-133
Washington, D.C. 20555

27 June 1981

Gentlemen:

Please read and consider the objections I have raised in the following letter to Mr. Joseph Hendrie, NRC.

Dear Mr. Hendrie:

- 1) disapprove the proposed low power testing at Diablo Canyon
- 2) decommission the Humboldt Bay nuclear power plant.

Both Diablo and Humboldt are situated near known earthquake faults. Both plants are located near large populations. The danger to human lives and surroundings is appalling should an accident of nature or man occur.

PG & E are profit making concerns. Their projects, investments, holdings and operations should not dictate the quality and very existence of life in the communities they serve.

Please consider the hypothetical local chemist down the road, whose business it is to mix volatile substances that have the potential to kill, contaminate and induce disease among the local populace. You, living nextdoor to him, would see to it that he close shop immediately, upon learning his hands are known to be shakey, and who knows when his energy factory may fly to the sky, taking you with it!

Accidents do happen at nuclear power plants. Earthquakes do occur on faults. Also, the disposal of nuclear wastes is still an unsolved problem. Please decommission Humboldt nuclear power plant and deny the low power test at Diablo.

Sincerely,

Mrs. Donna Boyko
