

18 DEC 1989

Docket/License: 50-322/NPF-82

Long Island Lighting Company  
ATTN: Mr. William E. Stieger, Jr.  
Assistant Vice President - Nuclear  
P. O. Box 618  
Shoreham Nuclear Power Station  
Wading River, New York 11797

Gentlemen:

Subject: Shoreham Inspection 50-322/89-91

This letter transmits the report of the Team Inspection conducted by members of this office during the week of September 18 - 22, 1989 at the Shoreham Nuclear Power Station. The inspection consisted of document reviews, interviews, and observation of activities to document and assess resource reductions at Shoreham. The results were discussed with members of your staff at the conclusion of the inspection.

Overall, the team concluded that activities at Shoreham are being conducted safely. However, we have determined that your position on Technical Specifications for the defueled condition requires further NRC review for completeness of applicable requirements and consistency between other facilities considering decommissioning. We recognize that your classification of systems as well as applicable surveillance and maintenance activities are dependent upon the results of our review.

We also recognize that certain technical issues concerning equipment preservation present unique challenges to your staff and to our inspection program. The inspection team found your approach to resolving these issues reasonable, although far from complete. We will continue to monitor your progress in this area.

The team also confirmed significant reductions in your staffing plan at Shoreham. The staffing levels were found adequate for the planned activities at Shoreham. We understand that you have committed to promptly notify Region I of any substantial variations from the staffing plan assessed by the inspection team.
