

Docket No. 50-029

LICENSEE: Yankee Atomic Electric Company

FACILITY: Yankee Nuclear Power Station at Rowe

SUBJECT: MEETING SUMMARY ON PLANT LIFE EXTENSION PROGRAM - LICENSEE
COMMENTS ON PRELIMINARY REGULATORY PHILOSOPHY AND CONCEPTUAL
APPROACH TO A LICENSE RENEWAL RULE

On October 13, 1989, the NRC published in the Federal Register for comment a Preliminary Regulatory Philosophy and an Outline of a Conceptual Approach to License Renewal Rule. At the licensee's request the staff met with representatives of Yankee Atomic Electric Company to discuss and receive clarification of the written comments provided to the staff on December 1, 1989.

During this meeting the licensee discussed each of the comments contained in their submittal and suggested possible revisions to the regulatory philosophy and conceptual approach published in the Federal Register Notice.

The staff informed the licensee that the staff could not discuss new or different regulatory options but that their comments would be factored into the ongoing public rulemaking process. The staff did not discuss at this meeting any new regulatory positions or revisions to published positions it may have been considering as a result of the license renewal workshop.
