RE: Radioactive Material License No. 47-17058-01

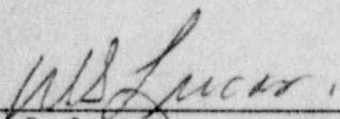

Gentlemen:

Presently, our radioactive material license allows transportation of unit doses of radiopharmaceuticals to Roane General Hospital and Veterans Memorial Hospital. Procedures for the transportation of these unit doses is on file with your office under this license. At this time, we request that our license be amended to include the transportation of reference standards (Barium-133 and Cesium-137) for instrument calibration.

Transportation procedues previously submitted will be followed when transporting these sources. However, since the sources are certified sealed sources and returned to our facility at the end of the scanning day and will not be transported by a common carrier, wipe testing and survey meter monitorings will not be performed upon reaching either of the above mentioned hospitals.

We have enclosed the required \$120.00 amendment fee. If you have any questions or require additional information, please do not hesitate to contact the undersigned.

Sincerely,

W. S. Lucas
Administrator
