February 12, 1990

Edward G Greenman
Nuclear Regulatory Commission
Region III
797 Roosevelt Road
Glen Ellyn, Illinois 60137

In response to the request dated January 17, 1990 regarding suggestions on specific topics for a Licensee Information Conference the following subjects are suggested:

1. NRR has developed several special inspection techniques over the last three years (SSFI, SSOMI, STI, ATI, etc.). We would like to see a presentation that catalogues the present techniques showing their purpose, scope and what triggers invitation of the various inspections. Also, identify any that are in development.
2. A presentation addressing the use of performance indicators.
3. A presentation addressing efforts being made to reduce long term open items on the lockets and also efforts being made to reduce the time delay on Technical Specifications reviews.
4. A presentation addressing NRC concerns regarding reductions in plant safety margins.
