U.S. Nuclear Regulating Commission
Washington, D.C. 20555

Dear Sir:

I would like to state my opinion on Sen. Murkowski's amendment (Nureg 0360) in stead of IAEA standards. Mr. Murkowski is Alaska's state smelter. I feel as if his ammendment is correct that the standard of the material caring the plutonium should be a very thick and protectively sealed container that must not be flammable.

Plutonium should be kept safe because it will get every organism around or semi around it sick or cause cancer in the body. this nuclear chemical is very strong if the plane does crash there would be a terrible mass of dead and sick animals.

Also there would be ³⁷ dead trees and the air would be contaminated for at the least (1000) one thousand years!

As I do understand that the plane would not crash intentionally, but if it was to run into a dust cloud from a volcano it would, and everything around for 100's of miles would be gone.

Sincerely concerned
Erin J. Thorne
Erin Lynn Thorne ..
