Dear Sir,

My name is Amber Newby, and I am writing about planes flying over Alaska carrying plutonium, I am asking for you to please carry it in safe containers. Because, if the plane crashed, in our state, and it was carrying the plutonium in glass jars, crates, or metal barrels they risk the chance of breaking, & spitting that radio-active plutonium, and then we would be exposed to its radiation, and get cancer, or if just a small amount is lost, an animal can eat it & if we hunt that particular animal, & then we eat it, we will become poisoned and die. So, I am asking that you just carry that dangerous chemical called plutonium in safe & un-breakable containers.

Thank-you for supporting NUREG 0360.
Sincerely,

Amber Newby
