EVENT DESCRIPTION AND PROBABLE CONSEQUENCES (10)

Iso'ation valve NV-250 was found not to have been verified closed under administrative control as required per Technical Specification 4.9.1.3. There were other valves downstream of NV-250 which were locked closed or normally closed which would have prevented a boron dilution of the RCS. Thus, the incident did not affect safe plant operation and the health and safety of the public were not affected.
