DOCKET NO.: 70-820

APPLICANT: United Nuclear Corporation
Wood River Junction, Rhode Island

SUBJECT: REVIEW OF AMENDMENT APPLICATION DATED FEBRUARY 5, 1981,
AS SUPPLEMENTED MARCH 13, 1981, TO UPDATE THE SECTION
OF THE LICENSE ON ADMINISTRATION, JOB 07000820A11S

I Background

The Wood River Junction Plant is being decontaminated for decommissioning and essentially all fuel processing equipment has been removed. The subject applications provide updated pages for Section 200 of the license to reflect basic changes in the nature of the activities being conducted. The revised pages also reflect changes in the organization but do not delete administrative requirements relevant to safety.

II Conclusion and Recommendation

The proposed changes to Section 200 simply reflect the changed nature of activities being conducted without deleting safety essentials. Approval of the revised Section 200 is recommended.
