Dear Neal,

We are in the process of completing transactions involving the importation to the U.S. of the following enriched uranium (nominal values):

Uranium (Kg)	Enrichment (W/O U-235)	^{150.4-235}	Delivery Date
2650	2.39	63.335	September, 1981
2150	2.06	44.290	January-April, 1982
810	1.63	12.203	January-April, 1982
<u>5610</u>		<u>120.828</u>	

The enriched uranium is contained in acceptable type 30B UF₆ cylinders. Actual transport will be handled by Edlow International.

The enriched uranium is presently owned by Gemeinschaftskernkraftwerk Tullerfeld (GKT), Postfach 477, Marc Aurel-Strasse 4, A-10111 Vienna 1, Austria. It was originally provided under DOE Enrichment Services contract UES/AU 100 for use in fueling the GKT power reactor and is currently stored at Reactor Brennelement Union GmbH (RBU), at Hanau, Federal Republic of Germany.

The subject material will be purchased and imported to the United States by the SWUCO Inventory Storage Company (SISCO), a wholly owned subsidiary of the Separative Work Unit Corporation (SWUCO). The material will then be delivered in accordance with the date listed in the above table to a DOE gaseous diffusion plant for use as feed. Please note that the 2650 KgU, 2.39% enriched, must be delivered to DOE as feed in September, 1981. Thus, your assistance in this issuance of an import license as soon as possible will be appreciated.

Sincerely,

James A. Garrett
Manager, Market Development

Neal: make sure that the import license is issued to SISCO, not SWUCO. Thanks
Jim J
