Amendment No. 6 for Source Material License SUA-1119 was issued June 11, 1981 to upgrade the effluent and environmental monitoring program and the quality control program for the Rio Algom Corporation facility. The upgrading of these programs was to bring them in line with staff licensing policies established after the initial development of these programs for this facility and to be compatible with programs required for other licensed facilities. These amended programs will enable the staff to reasonably assure the licensee's compliance with existing regulatory requirement and as such was done for the benefit of the Commission and should be exempt from fees.
