

JUL 21 1981

Docket No.: 50-341

APPLICANT: Detroit Edison Company

FACILITY: Fermi 2

SUBJECT: SUMMARY OF MAY 11 - MAY 15, 1981 MEETING REGARDING OPERATING LICENSE REVIEW

The purpose of the meeting was to conduct a fire protection review at the Fermi 2 plant. NRC staff conducting the review were R. Anand, A. Saeed, and J. Beam (Gage-Babcock, consultant). Detroit Edison representatives included W. Fahrner, W. Colbert, L. Schuerman, R. Anderson and J. Honkala.

In preparation for the meeting, the plant drawings of routings of cable trays and conduits for safety-related equipment were marked-up by the applicant to identify areas that require modifications in order to meet current NRC staff criteria. As a part of the review the staff examined the relationship of safety related components, systems and structures in specific plant areas to both combustible materials and to fire detection and suppression systems. The review included an evaluation of the automatic and manually operated water and gas fire suppression systems, the fire detection systems, fire barriers, fire doors and dampers, fire protection administration controls, and the fire brigade size and training.

Results of our review are included in the fire protection safety analysis by the Chemical Engineering Branch, Appendix F to the Fermi 2 Safety Evaluation Report (NUREG-0798).
