RECEIVED

Wm. A. Nixon
Uranium Process Licensing Section
Uranium Fuel Licensing Branch
Division of Fuel Cycle & Material Safety
US Nuclear Regulatory Commission
Washington, D. C. 20555

Dear Mr. Nixon:

Of the comments made by the USEPA on the revised West Chicago Stabilization Plan on August 11, 1980, several were answered in our submittal to you on December 9, 1980. Those that were not answered dealt with the specific characteristics of the tailings and sediment materials stored on the site, noting a need for investigation of specific characteristics.

In response to this need, Kerr-McGee employed Dames & Moore to investigate the characteristics of the materials relating to radon and thoron emanation and recalculate doses to the nearby population. Two reports have been generated to replace Appendix 2 of the Stabilization Plan and are attached for your information. Note that the volumes and areas of the residues on page 8 of the "Impacts" report have been recalculated and will replace those shown on page 3.22b of the revised Stabilization Plan.

Please let me know if you have questions or further comments.

Sincerely,
W. J. Shelley
