Mr. Charles E. MacDonald, Chief Transportation Branch Division of Fuel Cycle & Material Safety Office of Nuclear Material Safety & Safeguards U.S. Nuclear Regulatory Commission Washington, D.C. 20555

Subject: QUALITY ASSURANCE PROGRAM for Materials Lic. No. 06-06472-03 issued to: State of Connecticut Department of Public Safety Office of Civil Preparedness Radiological Maintenance & Calibration Facility 56 St. Clair Avenue New Britain, Conr. 06051

Dear Mr. MacDonald:

In accordance with 10 CFR 71 Appendix E, we are submitting the attached Quality Assurance Program as a basis for relocating the radioactive material presently associated with our Federal Emergency Management Agency (FEMA) Radiological Maintenance and Calibration Contract.

The State of Connecticut, Office of Civil Preparedness, does not have a routine need to transport radioactive material under License No. 06-06472-03. There are, however, two shipments that will be required to transfer our Maintenance & Calibration Operation to a new location. Our obsolete calibration device must be shipped to the University of Lowell at Lowell, Massachusetts and our Technical Operations CDV-794 Calibrator must be relocated to a proposed facility at Hartford, CT.

We trust the attached material will comply with the requirements of 10 CFR 71 "Packaging of Radioactive Material for Transport". If we can be of assistance in expediting the approval of this Program, please contact Lee Gerlander at the Radiological Maintenance & Calibration Facility in New Britain, CT. Telephone No.: (203) 827-7667.
