16 ABSTRACT (200 words or less)

A progress report is presented on development of a special purpose computer code for analysis of whip and impact of power piping.

The report describes the code design procedures and solution strategies being followed, and the structural elements being developed. The results of analyses using some of the structural elements are presented.

The report describes only the procedures being followed, not the completed code. Completion of a preliminary version of the code is scheduled for September 1980, and of the final version for September 1981.
