

Docket No. 50-245

July 24, 1981

DISTRIBUTION:

~~Docket~~
ORB #5 RF
Subject File

MEMORANDUM FOR: E. L. Jordan, Deputy Director
 Division of Resident and Regional
 Reactor Inspection, IE

FROM: Gus C. Lainas, Assistant Director
 for Safety Assessment
 Division of Licensing

SUBJECT: MILLSTONE 1 - ESF RESET CONTROL DESIGN DEFICIENCY -
 I&E BULLETIN 80-06

Task Interface Agreement ROI-80-15 assigned the responsibility to the Office of Nuclear Reactor Regulation for reviewing the licensee's responses to Items 1 and 3 of I&E Bulletin 80-06. Our review of Northeast Nuclear Energy Company responses to the bulletin for the Millstone Unit No. 1 are complete. The Technical Evaluation Report (TER) prepared by our contractor EG&G and our Safety Evaluation Report (SER) are enclosed.

We have concluded that the licensee has satisfied the concerns of I&E Bulletin 80-06 having completed modifications to four iso-condenser valves that could have moved from the "EMERGENCY" mode upon ESF reset in accordance with the marked up drawings of the proposed modifications that NNECO provided to EG&G/SRO. Please confirm that the valves were modified and tested as scheduled prior to returning the power following the 1980-1981 extended refueling outage.
