0 2	During normal power operation, torus water temperature was discovered to be 97°F.
0 3	Tech. Specs. 3.7.A.1.c requires torus water temperature to be maintained less than
0 4	or equal to 95°F. There were no effects on public neith or safety. This is a
0[5]	repetitive event as last reported on Reportable Occurrence Report No. 50-321/1981-078.

Docket #: 50-321

Narrative Peport for LER 50-321/1981-073

During normal power operation it was discovered that torus water temperature was $97^{\circ}F$. This exceeds the limit of less than or equal to $95^{\circ}F$. as stated in Tech. Specs. 3.7.A.1.c.

Torus cooling was immediately initiated and torus water temperature was decreased to less than 95°F. in less than 24 hours.

The cause of the torus water high temperature was due to continuous hot weather, thus increasing the temperature of the Rx building environment. This is a recurring problem during the hot months of the summer.
