Reference: License Number SUA-1354  
Docket or Reference No. 40-8722  
Letter to NRC, fr. J. C. Valiquette,  
dated July 31, 1981

Gentlemen:

In the referenced letter you were advised that our uranium plant, after being shut down for approximately six (6) months, began operations again in May of 1981. The letter also stated that stack sampling had been conducted the first two weeks in June and that the results of the stack sampling program would be reported when chemical analyses of the samples were received from the laboratory.

This letter is to advise you that the chemical analyses were received and data calculated to comply with license condition twenty six (26).

Attached is a stack sampling report covering the period of January through June of 1981. The report includes a description of the sampling equipment and procedures used, data sheets, forms used for recording data, methods of calculation, chemical analyses of the stack samples, and tables summarizing the data as requested in license condition 26.

Please advise if additional information is required.

Very truly yours,

BRUSH WELLMAN INC.
