U. S. Nuclear Regulatory Commission
Washington, DC 20555

SUBJECT: Arkansas Nuclear One - Unit 2
Docket No. 50-368
License No. NPF-6
Proposed Technical Specification
Change - Fuel Enrichment

Gentlemen:

Attached is a proposed change to the Arkansas Nuclear One - Unit 2 Technical Specification 5.3.1 for your review and approval. This change is needed to allow the use of higher enrichment fuel during the next operating cycle which is the first ANO-2 cycle scheduled to run for 18 months. Reload fuel for the upcoming Cycle 4 will be about 3.88 weight percent enriched. While increasing the limit to 3.9 weight percent would be adequate for Cycle 4, increasing the limit to 4.1 weight percent will allow for possible higher enrichments in subsequent cycles as an equilibrium 18 month cycle is achieved.

We have determined that this change is administrative in nature as it specifies a design limit only and thus does not, in itself, affect a Limiting Condition for Operation or a safety analysis. This change will not permit operation with the higher enriched fuel; it merely permits design and subsequent analysis. Actual operation with fuel designed to this limit will require analysis typically performed for each reload fuel batch.

Operation of ANO-2 in accordance with this change would not 1) involve a significant increase in the probability or consequences of an accident previously evaluated; or 2) introduce the possibility of a previously unanalyzed accident; or 3) involves a significant reduction in a margin of safety. Therefore, in accordance with 10CFR50.92(C), we have determined the proposed amendment as having no significant hazards considerations. The circumstances of this proposed amendment is not exigent or emergency; however, expeditious handling is requested.

Rec'd w/attc 16
#1,200

Mr. Robert A. Clark

-2-

August 1, 1983

Pursuant to the requirements of 10CFR170.22, we have determined this to be a Class II amendment. A check in the amount of \$1,200 is remitted.

Very truly yours,

John M. Griffin
