SUBJECT: NRC INSPECTION REPORT 50-382/94-23

This refers to the inspection conducted by Messrs. M. Runyan and C. Myers of this office on August 22-26, 1994. The inspection included a review of activities authorized for your Waterford Steam Electric Station, Unit 3, facility. At the conclusion of the inspection, the findings were discussed with those members of your staff identified in the enclosed report.

Areas examined during the inspection are identified in the report. The inspection verified completion of your commitments to Generic Letter 89-10, "Safety-Related Motor Operated Valve Testing and Surveillance." The closure of your activities related to commitments made for Generic Letter 89-10 is contingent on your submitting, within 60 days of the date of this report, a letter documenting additional commitments related to periodic verification and post-maintenance testing of motor-operated valves, and our subsequent approval of your submittal. This matter is discussed in more detail in Section 1.6 of the enclosed report.

The inspection consisted of selective examinations of procedures and representative records and interviews with personnel. The results of this inspection are documented on page 1 in the enclosed report.

In accordance with 10 CFR 2.790 of the NRC's "Rules of Practice," a copy of this letter and its enclosures will be placed in the NRC Public Document Room.

Should you have any questions concerning this inspection, we will be pleased to discuss them with you.

Sincerely,

Thomas P. Gwynn, Director  
Division of Reactor Safety
