ELECTRIC PRODUCTION DEPARTMENT

September 11, 1981

Docket Nos. 50-277  
50-278

Mr. Darrell G. Eisenhut, Director  
Division of Licensing  
Office of Nuclear Reactor Regulations  
US Nuclear Regulatory Commission  
Washington, DC 20555

Dear Mr. Eisenhut:

Your letter of December 22, 1980, concerning Control of Heavy Loads requested that our final report be submitted by September 22, 1981.

Due to the large amount of material required, the extensive nature of the review, the necessary involvement of an Architect Engineer and Nuclear Steam System Supplier (NSSS), plus the potential effects on operations which must be addressed, we will be unable to provide our response by the requested date.

To date, upwards of 4500 manhours has been expended in the associated analysis and report preparation. It is anticipated that this figure may exceed 6000 manhours before the report is complete. These figures do not include involvement in corrective actions for identified potential problems. As a consequence, we anticipate forwarding the bulk of our final report by December 23, 1981. The limited areas requiring input from the NSSS may be delayed until February 3, 1982. As stated in our letter of June 18, 1981, we shall continue to initiate corrective measures as soon as practical after the identifications of potential problems.

If there are any further questions on this matter, please do not hesitate to contact us.

Very truly yours,

*JW Gallagher*
