To Whom It May Concern:

I oppose the operation of the Diablo Canyon nuclear power plant. A nuclear power plant is an established public health threat not only to this generation but many to follow. Allowing a structure that requires as much stability as a nuclear power plant to be within such geographical proximity to an earthquake fault is irrational. I do not feel that either PG&E or the NRC has the right to endanger this land and its citizens by allowing operation of Diablo canyon.

As a concerned citizen, residing in California 28 years, I strongly oppose granting a low power testing license to Diablo canyon nuclear power plant. Let us rechannel our efforts into alternative sources of energy beginning with conservation energy and solar energy, in an attempt to preserve rather than destroy this planet. Thank you.

Sincerely,

Gayle McCreary
