Subject: Civilian Warning of Possible Radiation Problems at  
Davis-Besse:(Enrico Fermi also).

From : Dr. Read Backus: Chairman Safety Committee, City of Sylvania  
Dock Owner- Anchor Pointe Marina- Curtice, Ohio

Dear Sirs:

I believe in nuclear power safely and judiciously controlled. That's not the problem, or is it? Can you and I be certain that we have seen that all is being done to run the Davis-Besse plant with fully trained and alert persons in the safest way?

By the crow-flight, Anchor Pointe Marina is probably eleven miles from the plant. We have not been informed of any provisions of notification in case of a potential problem. I stress potential because if a problem is developing the Civil-Disaster Plan should be primed and moving. How far is a "minor incident" away from a MAJOR incident?

Please do not consider this a crank letter; it is not! I do not think the NRC, Davis Besse, Toledo Edison, and yes, You, have done your homework. We hear that the FCC is holding-up the radio license for some type of warning system. To this I most strongly disagree. If you, or Toledo Edison wanted to use it for your benefit, it would not take many phone calls or letters. Right?

I also feel that the South shore of Lake Erie should have some system of warning from Enrico-Fermi in Michigan, when it becomes critical.

I will await your response, not too patiently. *Thank You.*

Sincerely Yours,

*Read Backus*

Read Backus, D.D.S.
