Mr. Harold R. Denton, Director
Nuclear Reactor Regulation
U.S. Nuclear Regulatory Commission
Washington, DC 20555

Dear Mr. Denton:

Enclosed are ten copies of Peach Bottom Atomic Power Station Emergency Plan Implementing Procedures. These procedures are submitted per regulations in 10 CFR 50, Appendix E, Section V. Three copies have been sent under separate cover to Boyce H. Grier, Region I, Office of Inspection & Enforcement.

These procedures as submitted address the Peach Bottom Emergency Plan currently under NRC review. They are being reviewed internally to modify them according to existing emergency facilities and equipment. Revisions based on this review will be implemented on April 1, 1981.

The changing status for the plan and related facilities will require continuing review and revision to the procedures during the transition period from the old plan to the complete implementation of the new plan. State and county emergency plans are still in Regional Advisory Committee (RAC) review. We have been advised that final drafts of the RAC reviewed state and county plans will be transmitted to us between March and July of 1981. Liaison is maintained with the state and county emergency management agency personnel to discover and correct any incompatibilities between the Peach Bottom Emergency Plan and the state and county plans. A consultant contracted to Philadelphia Electric Company has been providing assistance to expedite the development of local government plans. The implementing procedures for the Emergency Plan currently in review by NRC will

be continuously reviewed during the interim period addressing such major areas of concern as meteorological, communication, and other systems until all aspects of the plan have been finalized. It is understood that copies of future revisions to these procedures are to be submitted to the same office within 30 days of such change.

Very truly yours,

Enclosure
