(b) Letter, USNRC to VYNPC, dated August 7, 1981

Subject: NUREG-0737, Item II.K.3.44 - Evaluation of Anticipated  
Transients With Single Failure

Dear Sir:

This letter responds to Reference (b) which requested additional information regarding the implementation of the subject NUREG Item at Vermont Yankee. The information requested was a verification that the assumptions and initial conditions used in the generic analysis described in the General Electric BWR Owner's Group report, dated December 29, 1980, are representative for Vermont Yankee.

We have reviewed the analysis assumptions and initial conditions used for the generic analysis and determined that they are representative for Vermont Yankee. In light of the information presented above, Vermont Yankee is planning no further action and considers Item II.K.3.44 closed.

We trust this information is satisfactory; however, should you have any further questions, please contact us.

Very truly yours,

VERMONT YANKEE NUCLEAR POWER CORPORATION

R. L. Smith  
Licensing Engineer
