The Nuclear Regulatory Commission
Washington DC

Gentlemen;

I am writing in regards to your recent decision to revoke the Diablo Canyon operating permit. If this action was taken to assure that minor design errors have been corrected, it may have some logic, but if the intention is to require a design review, it can not be justified.

The facility was reviewed (nearly to death) over the past ten years, then redesigned when an imaginary fault was conveniently found in a belated attempt to kill the project. It is obvious that at this point much of the plant has been overdesigned by the builder in an effort to overcome these handicaps. Your group approved these designs, so they must be adequate. If construction errors were made, they should be corrected, and the start-up should continue.

Although I don't have the press coverage available to the "Abalone Alliance" or Jerry "Governor Moonbeam" Brown, I am a PG&E customer who will share the burden of thousands of dollars for each day operation of the plant is delayed.

It is imperative you balance the cries of possible impending doom from the "Nervous Nellies" with the power requirements of the region, and the proven safety record of the Nuclear Power industry. Even after the monumental operating errors at TMI, no one was injured.

I urge you to expedite the operation of Diablo Canyon.

Sincerely;

Clifford A. Ricker

November 24, 1981

Nuclear Regulatory Commission
Washington, D.C. 20510

Gentlemen:

Our local newspaper indicates that the NRC has voted to deny licensure to the nuclear reactor at Diablo Canyon here in California. I find this a deplorable response to an idiotic policy by our state government which will be rectified comes the next election. This is a totally irresponsible response on the part of the federal government and should be rectified as quickly as possible. It is our opinion that the contribution of nuclear power to energy shortage should be apparent to all and will help to reduce electrical bills so that the poor can afford the simpler amenities of life.

Respectfully yours,

Thomas A Nicholson MD
