RE: License No. 24-12699-01

Gentlemen:

Mr. Sam Mulay recently inspected the Nuclear Medicine Department at our facility. During this inspection Mr. Mulay identified one item which appeared to be in non-compliance with our radioactive materials license.

This section quoted referred to Item 9.1 in our license application dated February 27, 1989. This section indicated that the hot lab will be used for receipt, storage, preparation and measurements of radioactive materials. This statement is correct in that the hot lab is used for the receipt of radioactive materials if it is delivered during normal working hours.

However because of security or lack thereof, we started having the radioactive materials delivered to the tech area which was labelled for radiation but in normal working hours was also used as an eating area. This situation has been totally remedied in that all radioactive materials at all times are now going directly to the hot lab under the direction of security personnel. As of the date of this inspection, the security personnel were instructed in radiation safety and instructed in

delivery of packages to the hot lab area. This is now the standard procedure for the receipt and delivery of all radioactive materials during routine and non-routine hours. We feel that we are now in full compliance, this was achieved one day after the date of inspection.

If you have any questions concerning our response to the above item, please do not hesitate to call.

Sincerely,

Marvin F. Feldman
Radiation Safety Officer
Nuclear Medicine Department
