I live within walking distance of the Palisades Nuclear Plant. I understand that there are casks of nuclear waste stored there that have never been approved or never even been tested. I personally would like to see the plant closed down but at least, they could be made to look after their nuclear waste in such a way that it guarantees the safety of those around it. As one who has lived on the Dunes- I know how the sands shift. I feel that this is a silly place to store casks of spent radioactive fuel.
