Docket Nos. 50-245; 50-336; 50-423

Mr. John F. Opeka
Executive Vice President-Nuclear
Northeast Nuclear Energy Company
P.O. Box 270
Hartford, Connecticut 06141-0270

Dear Mr. Opeka:

SUBJECT: MILLSTONE COMBINED INSPECTION 50-245/92-33; 50-336/92-35;
50-423/92-31

This refers to the safety inspection conducted by Mr. P. Swetland of this office on December 23, 1992, through February 2, 1993, at Millstone Station in Waterford, Connecticut. The preliminary findings were discussed with Mr. S. Scace, the Unit Directors, and others of your staff at the conclusion of the inspection. Areas examined during the inspection are described in the enclosed report. Within these areas, the inspection focused on issues important to public health and safety and consisted of performance observations of ongoing activities, independent verification of safety system status and design configuration, interviews with personnel, and review of quality records.

During this inspection, you identified and corrected problems related to Unit 1 feedwater flow transmitters and Unit 2 accident monitoring systems. We reviewed your corrective actions and determined they were acceptable. We also noted the problems had minor safety significance. Therefore, in accordance with Section VII.B of the Enforcement Policy, enforcement discretion was exercised for these cases.

We appreciate your cooperation.

Sincerely,

080032

A. Randolph Blough, Chief
Projects Branch No. 4
Division of Reactor Projects

Enclosure: NRC Combined Inspection Report 50-245/92-33; 50-336/92-35; 50-423/92-31
