Docket No. 50-457
License No. NPF-77
EA 93-063

During an NRC inspection conducted on March 18, 1993, a violation of NRC requirements was identified. In accordance with the "General Statement of Policy and Procedure for NRC Enforcement Actions," 10 CFR Part 2, Appendix C, the violation is listed below:

Technical Specification 3.4.11 requires, in part, that at least one reactor vessel head vent path be operable during reactor operations in modes 1-4. With one reactor vessel head vent path inoperable, startup and/or power operation in modes 1-4 may continue provided, in part, that the inoperable vent path is restored to operable status within 30 days. Otherwise, the plant must be in hot standby within 6 hours and in cold shutdown within the following 30 hours.

Contrary to the above, from November 17, 1991, to March 6, 1993, a period in excess of 30 days, Unit 2 was operated in Modes 1-4 and both reactor vessel head vent paths were inoperable, and the unit was not brought to hot standby within 6 hours and placed in cold shutdown within the following 30 hours.

This is a Severity Level III violation (Supplement I).
