

Dec 15, 1980

The Hon. John F. Ahearne, Chairman
U.S. Nuclear Regulatory Commission
Washington, D. C. 20555

Dear Commissioner Ahearne:

Since Unit No. 1 on Three Mile Island
belonging to General Public Utilities was not
damaged in the accident involving Unit
No. 2 and it is similar in design and
operation to other units that are apparently
operating safely in other parts of the Country
please advise as to the justification
the Nuclear Regulatory Commission believes
it has for the prolonged delay of a restart.

It must be recognized that the
protracted delay is causing a loss of
Confidence by many investors in the entire
spectrum of Utility companies and will
cause investment Capital to be available
at only the most exorbitant rates.
Consumers and investors alike deserve
to hear a complete explanation of your
action together with your assessment
of the positive and negative consequences.
I am hoping for an early
optimistic reply.

Respectfully submitted,

John T. Henggele
