

Sirs,

DOCKET NUMBER FR-30, 32, 70, 150
PROPOSED RULE (45 FR 70374)
SMELTED ALLOYS

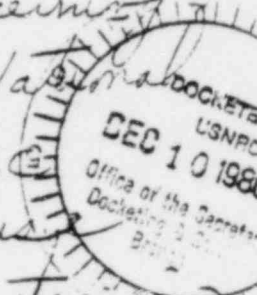

001338

I am writing concerning
the recent entry into the National
(October 27th)
Register, whereby the NRC
recommended a plan to use
low-level radioactive wastes
(technetium-99, for medical use)
manufacturing household items.

This proposal ignores the
principle of "no lower threshold"
so prevalent in today's theory
of acceptable radiation levels.

We do not need additional
radiation in our homes, no matter
how small the dosage. Please
reconsider such plans, and
keep radioactive wastes out of
our homes.
