December 10, 1980

DOCKET NUMBER PR-30, 32, 70, 150
PROPOSED RULE (45 FR 70874)
SMELTED ALLOYS

It has been brought to my attention that on December 12 there is a meeting of the NRC to discuss the use of Uranium tailings. It is also my understanding that a proposed use of these tailings is to put them into coins and car frames.

Uranium tailings are radioactive materials and in no way safe to be used in manufacture of anything!

In areas that uranium is mined and the tailings are left behind there is an abnormally high amount of cancer in the population.

You would make a decision that would divide this cancerous debris among our entire population!?!?

I urge you to consider your decision on this subject very seriously as it will affect everyone of us!
