

DOCKET NUMBER PR-30, 32, 70, 130
PROPOSED RULE (45 FR 70874)
SMELTED ALLOYS

001927

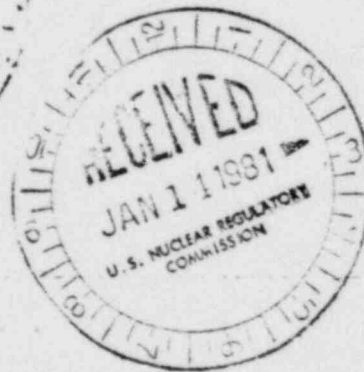

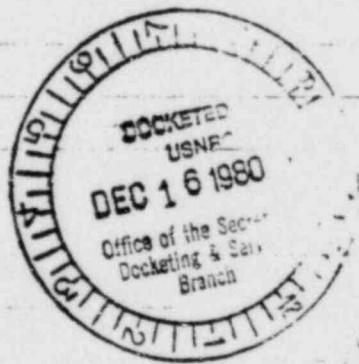

Sir:

I am seriously concerned with the news that the NRC plans to ease up on rules regarding contamination and waste metal from uranium enrichment plants.

Perhaps to some one this seem "good business" or perhaps "productive" to recycle radio active scrap metal. This is short sighted to say the least. Radio active materials affect everyone & everything for a very long time, we need to take long term views of our environment survival and future life on this planet.

Do not allow this waste material to enter the market place.
