DOCKET NO. 50-320
LICENSE NO. DPR-73

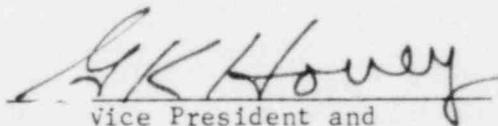

METROPOLITAN EDISON COMPANY

This is to certify that a copy of Technical Specification Change Request No. 30 to Appendix F of the Operating License for Three Mile Island Nuclear Station Unit 2, has, on the date given below, been filed with the U.S. Nuclear Regulatory Commission and been served on the chief executives of Londonderry Township, Dauphin County, Pennsylvania and Dauphin County, Pennsylvania by deposit in the United States mail, addressed as follows:

Mr. Donald Hoover, Chairman
Board of Supervisors of
Londonderry Township
R. D. #1, Geyers Church Road
Middletown, Pennsylvania 17057

Mr. John E. Minnich, Chairman
Board of County Commissioners
of Dauphin County
Dauphin County Court House
Harrisburg, Pennsylvania 17120

METROPOLITAN EDISON COMPANY

By 
Vice President and
Director, TMI-2

Three Mile Island Nuclear Station, Unit 2 (TMI-2)
Operating License No. DPR-73
Docket No. 50-320

I. Technical Specification Change Request No. 30

The licensee request that the attached pages 3.2-3 and 5-7 be substituted for the existing pages in Appendix B of the TMI-II Technical Specifications.

II. Reason for Change

This change is requested based on the fact that analysis required for complete submittals are not available in the thirty day (30) period. Strontium analysis are performed offsite and the turn around time does not allow submittal of complete information in the required thirty day period. This then requires submittal of incomplete information or a second submittal correcting the previous submittal. Strontium analysis can be performed onsite but the results are not certifiable, thus, the offsite analysis is required. Normally the offsite analysis requires a minimum of 5 to 6 weeks to provide results. This time can not be reduced due to a required 4 week decay period prior to analysis. Therefore, a 60 day reporting is necessary to provide accurate reporting. Additionally, this change will make this reporting requirement consistent with other reporting requirements.

III. Safety Evaluation Justifying Change

Offsite doses are primarily controlled through the use of setpoints on effluent monitors. Setpoints are established so that offsite dose limits will not be exceeded. Additionally, a program is in place that monitors offsite activity. This offsite activity is evaluated for potential doses to the public. If any unusual amount of activity is noted, dose assessments are made to expeditiously evaluate resultant doses. If the results of these assessments indicate actions are necessary, appropriate procedures are immediately employed in order to reduce releases. Changing the reporting period from 30 to 60 days will have no effect on the actions described above. Because of the above and since the report is after the fact, this change has no safety implications.

IV. Amendment Class (10CFR170)

The licensee has determined that because the proposed Technical Specification Change involves a Pro Forma change and does not have safety significance, the change constitutes a Class II License Amendment (per 10CFR 170.22). A fee of \$1,200.00 is applicable. Therefore, enclosed please find a check for \$1,200.00.
