January 30, 2020

To: NRC Document Control Desk

Subject: Notification regarding Barton Model 763 or 763A or 764 Electronic Transmitter Qualified Life Update

Cameron issued a Product Advisory to its nuclear customers on January 15, 2020 on the subject topic. This Cameron product advisory 210316064.2, dated 1/9/2020, addressed a recent NRC inspection report finding relayed to us by one of our customers. Cameron investigated the issue and determined that it did not constitute a deviation or defect as defined in 10CFR21. However, after issuing the advisory and consulting with NUGEQ, it was recommended that Cameron formally notify the NRC for their awareness and any NRC feedback. Cameron is actively participating and supporting an ongoing NUGEQ working group to provide additional guidance on the topic, as well as use of Cameron reports and analysis tools identified in the advisory.

Sincerely,

Dr. Bernard Johnson
