TMI Program Office
Attn: Dr. B. J. Snyder, Program Director
U. S. Nuclear Regulatory Commission
Washington, D.C. 20555

Dear Sir:

Three Mile Island Nuclear Station, Unit 2 (TMI-2)
Operating License No. DPR-73
Docket No. 50-320
Technical Specification Change Request No. 32, Amendment 1

Enclosed are three copies of an amended page to our Technical Specification Change Request No. 32. During the preparation of the changed pages, monitoring requirements for Strontium 90 were omitted. Although the submittal was in agreement with the Branch Technical Position (BTP) on offsite monitoring and the BTP does not require Strontium monitoring for plants in usual configurations, we realize the TMI-II is unique in the fact that above normal quantities of Strontium are present. We will continue to monitor Strontium 90 as required by the Recovery Technical Specifications, and as indicated in the amended page enclosed herein.

Also enclosed is one signed Certificate of Service for the amended Technical Specification Change Request No. 32 pages to the Chief Executives of the Township and County in which the facility is located.

Sincerely,

R. C. Arnold
Senior Vice President
