Docket No. 50-397

Mr. R. H. Engelken  
U.S. Nuclear Regulatory Commission  
Region V  
1450 Maria Lane, Suite 210  
Walnut Creek, California 94596

REGION V

Dear Mr. Engelken:

Subject: SUPPLY SYSTEM NUCLEAR PROJECT NO. 2  
REQUEST FOR EXTENSION OF 10CFR50.55(e) REPORTABLE  
CONDITION #73 CONCRETE AND GROUTING WORK

Reference: Telecon dated November 20, 1981, R. T. Johnson to J. Elin,  
same subject.

Per the referenced telephone conversation between R. T. Johnson, WNP-2  
Project QA Manager and Mr. John Elin of your office, the Supply System  
requested and was granted an extension of the reporting date for  
10CFR50.55(e) Reportable Condition #73.

The reason for the extension request is that the microcoring testing program  
currently being conducted consists of several lengthy steps and the coring  
of the specimens is required before any evaluation can be made. At this  
time, it is anticipated that the pouring and curing process will be completed  
December 18, 1981. Additionally, it is anticipated that testing (which  
follows pouring and curing) will be completed by January 15, 1982. The  
Architect Engineer has indicated that final evaluation of test data and  
preparation of a response will require two weeks.

For these reasons, a Final Report will be submitted to the NRC by February  
5, 1982.

Should you have any questions regarding this letter, please contact  
R. T. Johnson, (509) 377-2501, extension 2712.

Very truly yours,

*R. W. Matlock*  
R. W. Matlock  
Program Director, WNP-2
